

Cancellation Fee — Android vs iOS

The original requirement was:

- If the user cancels **before completing 2 months**, charge an additional **\$35 cancellation fee**.
- If the user has completed **2 months or more**, they can cancel for free.

Android — Stripe

This is technically possible with Stripe because we control the payment flow.

When the user taps **Cancel Subscription**:

1. Backend checks when the user's subscription started.
2. If the user has been subscribed for **less than 2 months**, the backend attempts to charge the saved payment method **\$35**.
3. Once the cancellation fee is successfully processed, the subscription can be cancelled.
4. If the user has been subscribed for **2 months or more**, no fee is charged and the subscription can be cancelled normally.

The important part is that the membership duration should be calculated **on the backend** using the actual subscription start date.

iOS — Apple IAP

We cannot implement the same cancellation-fee flow reliably with Apple IAP.

The main reason is that Apple controls the subscription and cancellation process. A user can cancel their Apple subscription from:

iPhone Settings → Apple Account → Subscriptions

Our app does not get an opportunity to intercept that cancellation and require the user to pay a \$35 fee first.

Also, Apple does not provide the user's payment method/card details to our app, so we cannot simply charge the \$35 through Stripe after an Apple IAP subscription is cancelled.

Creating a separate \$35 IAP product also doesn't solve the problem because the user could cancel without purchasing it, and we cannot force that purchase as a cancellation penalty.

So the exact **\$35 early-cancellation fee cannot be enforced consistently on iOS** using Apple IAP.

Proposed Solution - \$40 Every 2 Months

Introduce a regular **two-month subscription at \$40 per billing cycle** for new cleaners on both Android and iOS. This replaces the previously proposed initial upfront period followed by monthly billing. The new plan continues renewing every two months.

Pricing and benefits

- **New cleaners:** the two-month plan is the only plan offered for their first purchase after launch.
- **Price:** \$40 upfront for two months, equivalent to \$20 per month. Two existing \$20.99 monthly payments total \$41.98, so the new plan saves \$1.98 per two-month period.
- **Automatic renewal:** \$40 every two months after the initial purchase; users do not purchase again each cycle. There is no automatic change to monthly billing in month three.
- **Cancellation:** no \$35 cancellation fee. Cleaners may stop future renewals anytime and retain access until the paid period ends, subject to refunds or revocation.

Example: subscription purchased on January 1

- **January 1:** pay \$40 and receive access until March 1.
- **February:** no charge; access is already covered.
- **March 1:** renew for \$40 and receive access until May 1.
- **If renewal is disabled before March 1:** access ends on March 1 and no next renewal charge is collected.

Pricing clarification: $\$20.99 \times 2$ is \$41.98, not \$41.99. The proposed two-month price is \$40. Confirm that the exact \$40 price is available in App Store Connect before finalizing iOS pricing.

Existing Cleaners - Announcement and Plan Choice

Existing cleaners can **choose to switch from \$20.99/month to \$40 every two months while their monthly subscription is active**. Switching is optional; both plans renew automatically. Customers who book cleaners remain free.

Step 1 - Release an announcement version first

Release an app version with an announcement banner before launching the new plan. Explain the new price, automatic renewal and optional switch for existing cleaners. Active monthly subscriptions will not be changed without the cleaner choosing to switch.

NEW SUBSCRIPTION PLAN - COMING SOON

We are introducing a new subscription plan at **\$40 every two months**. New cleaners will join on this plan when it launches.

Already subscribed? Keep your **\$20.99/month** plan or choose to switch to **\$40 every two months** when the new plan launches. Your switch takes effect at your next renewal. Both plans renew automatically; no separate purchase is needed each cycle.

Cancel future renewals anytime and keep access until your paid period ends.

Step 2 - Launch the new plan and switching option

- **New cleaners:** display only the \$40 two-month plan.
- **Active monthly subscribers:** show a "Switch to 2-month plan" option in subscription settings. Confirm the \$40 charge, two-month renewal interval and effective date before scheduling the change.
- **Switch timing:** keep the current paid month intact. At the next renewal, charge \$40 instead of \$20.99 and start two months of access; subsequent renewals are automatic every two months. Do not charge twice or create a second parallel subscription.
- **If they do not switch:** their monthly plan continues renewing automatically at \$20.99 while renewal is enabled; no monthly re-purchase is required.
- **Fully expired subscribers:** offer both plans. They may purchase the \$40 two-month plan or the same \$20.99 monthly plan again; if they buy neither, access stays inactive.

A normal renewal date is not subscription expiry. Verify provider status and handle billing retry/grace periods before treating a subscription as expired. Show a pending switch and its effective date until the provider confirms the new plan.

Platform Setup and Rollout

Android - Stripe

Create a recurring \$40 price with a two-month billing interval. Keep the \$20.99 monthly price for existing cleaners. Both prices renew automatically after the initial purchase.

The backend verifies cleaner eligibility and checks for active subscriptions before purchase. Confirm payment before granting access; use Stripe webhooks to update renewals, expiry and payment status.

For an active monthly subscriber who confirms a switch, use a subscription schedule to change the existing subscription to the two-month price at the current period end, with no mid-cycle charge or proration. Then continue two-month renewals. Ordinary cancellation stops renewal at the paid-period end; ensure a pending switch does not override cancellation.

iOS - Apple IAP

Create a two-month auto-renewable subscription product alongside the existing monthly product in the same subscription group, with the same access level. Configure the proposed \$40 price if available. Keep the monthly product supported for existing cleaners.

Offer the two-month product as an optional switch for active monthly subscribers. With both products at the same level in the same group, Apple treats the different-duration switch as a crossgrade effective at the next renewal. Apple confirms the change and manages charging; display the verified pending product and effective date.

Cancellation remains managed by Apple. This regular two-month product needs no introductory offer and never switches automatically to monthly billing.

Verify Apple storefront and subscription-management options: hiding the monthly plan in the app alone may not prevent new users from selecting it through Apple. Confirm how the new-cleaner restriction can be applied before launch.

Shared app and backend changes

- Configure the announcement banner separately from activation of the new purchase flow, so the notice release comes first.
- Recognize existing cleaner eligibility using verified subscription history; preserve both monthly and two-month product IDs and provider prices.
- Add the switch option, price/renewal confirmation and pending-switch display. Update purchase and cancellation wording for the actual billing interval.
- Keep verified subscription dates and payment status in Firebase. Avoid duplicate purchases, and preserve restore-purchase and cleaner-visibility behavior.

Checks before launch

Verify active-subscriber switches at the next renewal, no duplicate charges, unchanged monthly renewal when no switch is chosen, expired-subscriber plan choice, cancellation with a pending switch, restore purchases and payment failures. Confirm the iOS price before publishing terms.
